Hoshizaki IM-240XWPE-U UltraCube model is a modular and stackable (extension) water cooled ice maker with UVC sanitization producing up to 209kg of cube ice per 24 hours. This model is compatible with Hoshizaki storage bins.

Hoshizaki recommends that the water-cooled condenser should be connected to a closed circuit recirculating type cooling system utilizing a tower, water chiller or similar. Water make up should be via a ball valve/break tank arrangement. Whilst connecting a water-cooled condenser to a mains water (potable) supply will not affect the performance of the machine, it will most certainly cause high water use and waste of a valuable resource that is not recommended. It is likely that the connection of such units to the mains water supply may be a contravention of local water authority by-laws.
