Hoshizaki IM-240DWNE-HC-23 is a water cooled, modular and stackable ice maker producing up to 190 kg of cube ice per 24 hours. This model is compatible with our storage bins.

Hoshizaki recommends that the water-cooled condenser should be connected to a closed circuit recirculating type cooling system

utilizing a tower, water chiller or similar. Water make up should be via a ball valve/break tank arrangement. Whilst connecting a water-cooled condenser to a mains water (potable) supply will not affect the performance of the machine, it will most certainly cause high water use and waste of a valuable resource that is not recommended. It is likely that the connection of such units to the mains water supply may be a contravention of local water authority by-laws.

Ice cube dimensions and weight - disclaimer: The drawing is for illustration purposes only. Cube size and weight may differ due to local installation conditions.

- Ice making system with an automatic rinse cycle
- Each ice cycle is made with fresh water
- Closed Cell System helps produce compact, hard and geometrically perfect ice
- Closed water circuit for contamination protection
- Electronic controller
- System comes with a magnetic water pump that has no direct coupling, which prevents any leakage
- Stainless steel frame inside
